STEPS TO RESPOND TO AN OPIOID OVERDOSE

Learn what to do before an emergency • Share with family and friends

STEP

1

LOOK FOR SIGNS OF AN OPIOID OVERDOSE

Signs of an Overdose:

- Slow or shallow breathing
- Very sleepy and cannot talk
- Pale skin, bluish lips and/or fingertips
- Gurgling or deep snoring sounds
- Won't wake up or respond to you

If you see signs of an overdose:

Shout the person's name and rub your knuckles hard up and down the middle of their chest between where the ribs meet (the breastbone).
If no response, follow steps 2-5.

STEP

2

CALL 9-1-1

Tell the 9-1-1 operator, "Someone is not breathing and cannot respond."

Give a specific address or tell the operator where you are.

STEP

3

GIVE NALOXONE¹

Naloxone comes in different forms such as nasal spray and auto-injector. To use, do what your pharmacist says. Go to <https://opiorescue.com/rescue> and click on 'Step 3 - Administer Naloxone' to read and see pictures on how to use each form.

STEP

4

BEGIN HANDS ONLY CPR²

Place heel of one hand over middle of person's chest where the ribs meet (the breastbone) and place other hand on top of first hand • Keep elbows straight and shoulders directly above hands • Push straight down (at least 2 inches) hard and fast to the beat of the Bee Gee's song "Stayin' Alive" or "Crazy in Love" by Beyonce.

STEP

5

WAIT & EVALUATE

Stay with the person until help comes • If little or no breathing, continue hands only CPR and give second dose of naloxone in 2-3 minutes • If breathing, place the person on their side with top leg and arm crossed over body to prevent choking

How to Prevent Accidental Opioid Overdose

Take meds as instructed • Only take meds prescribed to you • Don't take street drugs or borrow meds from anyone • Don't stop taking or change dose of opioids without talking to your doctor • Don't mix opioids with alcohol, benzodiazepines (meds such as Xanax[®] [alprazolam] or Ativan[®] [lorazepam]), or meds that make you sleepy • Store meds in safe place • Safely get rid of meds you don't want or are not going to use • Don't sell or give away opioids

1. Opioid overdose reversal agent Opvee[®] (Nalmefene) is also available as a nasal spray. 2. Anyone trained in CPR should also perform rescue breaths.

TAKE-BACK OPTIONS ARE THE SAFEST WAY TO GET RID OF OPIOIDS AND ALL OTHER UNWANTED MEDS

Find Drop-Off Sites Available Year Round:

Type "medication disposal near me" in Google Maps

bit.ly/diversion_control

<https://safe.pharmacy/drug-disposal/>

Take Back Programs are available the last Saturday of every April and October:

takebackday.dea.gov (Locations and dates available by early April and October)

Other Disposal Options Available at:

bit.ly/med_disposal_handout
